

COVID-19 Fit To Fly Test Certificate

This is to confirm that the individual named on the certificate underwent a molecular RT-PCR (Reverse Transcriptase-Polymerase Chain Reaction) test for SARS-CoV-2 on the time and date detailed on their certificate. The instrument used was the DNA Nudge. This instrument has been authorised for use by the Medicines and Healthcare Products Regulatory Industry and holds a CE mark for IVD clinical use.

Validation trial tests indicated sensitivity of 94.4% (between 86-98%, with a 95% confidence interval) and specificity of 100% (99-100%, with a 95% confidence interval).

This Molecular RT-PCR test identifies whether the individual is currently infected with the SARS-CoV-2 (COVID-19) virus at the time of testing. This RT-PCR test looks for viral RNA in a sample of secretions obtained from the nose and/or throat (oropharyngeal and/or nasopharyngeal swab).

At the time and date detailed on the individual's certificate, the holder was not currently exhibiting COVID-19 symptoms and had not been in contact with anyone suspected or confirmed as having COVID-19 in the last 14 days.

Should you have any concerns over the validity of the certificate, please contact us at info@elevationsafetygroup.com to verify that the holder of the certificate has received a negative test on the time and date stated on the certificate and is considered fit to fly.

Stuart Sloan
Operations Director

A handwritten signature in black ink, appearing to read "Stuart Sloan", is written over a horizontal line.
